I think there are also solutions out there for Apostol's Mathematical Analysis. Also, I think you asked a question about this exercise back in November? I did finally get around to updating that. I don't have anything insightful to say about the motivation for the problem, but at least the solution should now be mathematically correct (I hope).

I have an option to choose between the two books Mathematical Analysis by Tom Apostol and Principles of Mathematical Analysis by Walter Rudin as I was gifted Rudin by a friend and ended up buying the other book as well. I will be indebted if someone told me which one is the tougher one and which one is better for the self-learner (I am in high school and have no access to a professor or anyone).

Apostol's treatment of basic topology as an extension of set theory is particularly good! Once you have a clear understanding of limits as they relate to topology then you'll finally "get" the whole delta-epsilon arguments from calculus. As an introductory text to the world of mathematical analysis I don't think this book can be beat.

### **Mathematical Analysis, Second Edition: Tom M. Apostol ...**

Mathematical analysis is the branch of mathematics dealing with limits and related theories, such as differentiation, integration, measure, infinite series, and analytic functions.. These theories are usually studied in the context of real and complex numbers and functions. Analysis evolved from calculus, which involves the elementary concepts and techniques of analysis.

A very good review of these results can be found in the volume 4 of Thirring's "A Course in Mathematical Physics". Even the book version is a bit hard to read, as much mathematical analysis is required. The "Analysis" of Lieb and Loss is a book on analysis which has as a theme the great result of Lieb and Thirring. It is a real book on analysis.
