Thermodynamics is the branch of physics that deals with heat and temperature, and their relation to energy, work, radiation, and properties of matter. The behavior of these quantities is governed by the four laws of thermodynamics which convey a quantitative description using measurable macroscopic physical quantities, but may be explained in terms of microscopic constituents by statistical ...

A thermodynamic system is a group of material and/or radiative contents. Its properties may be described by thermodynamic state variables such as temperature, entropy, internal energy, and pressure.. The simplest state of a thermodynamic system is a state of thermodynamic equilibrium, as opposed to a non-equilibrium state. A system is defined as quantity of matter or a region in space chosen ...

Il coefficiente di prestazione (traduzione dall'inglese coefficient of performance o COP) indica la quantità di calore immesso (riscaldamento) o asportato (raffreddamento) in un sistema rispetto al lavoro impiegato. È quindi un parametro che rappresenta la bontà di funzionamento di una macchina ma, a differenza del rendimento termodinamico, può essere maggiore dell'unità, poiché oltre ad ...

Em física, um sistema, originalmente chamado uma substância de trabalho, é definido como a parte do universo que está sob consideração. Qualquer ente ou conjunto de entes sob enfoque define um sistema. Uma fronteira hipotética ou real sempre separa o sistema do resto do universo, resto que integra o que se designa usualmente por ambiente, vizinhança ou em determinados casos - em ...

Steam Turbine. In general, a steam turbine is a rotary heat engine that converts thermal energy contained in the steam to mechanical energy or to electrical energy. In its simplest form, a steam turbine consists of a boiler (steam generator), turbine, condenser, feed pump and a variety of auxiliary devices. Unlike with reciprocating engines, for instance, compression, heating and expansion are ...

História. O motor de quatro-tempos foi primeiramente patenteado por Alphonse Beau de Rochas em 1861. [3] E antes, em aproximadamente 1854 - 57, foi espalhado boatos de que dois italianos (Eugenio Barsanti e Felice Matteucci) teriam inventado um motor muito semelhante, mas a patente foi perdida. A primeira pessoa a construir um motor de quatro tempos foi o engenheiro alemão Nikolaus Otto [4].
