This Concept introduces the student to complements, in particular, finding the probability of events by using the complement rule.

### **Complement Rule for Probability - CK-12 Foundation**

18.05 class 3, Conditional Probability, Independence and Bayes' Theorem, Spring 2014. or simply 'the probability of A given B'. We can visualize conditional probability as follows. Think of  $P(A)$  as the proportion of the area of the whole sample space taken up by A. For  $P(A|B)$  we restrict our attention to B.

### **Conditional Probability, Independence and Bayes' Theorem ...**

Think about it. If the calculator works 96% of the time, then obviously, 4% of the time it will NOT work. Since each probability is independent, the probabilities can be multiplied. Thus, the probability of BOTH calculators not working is  $(0.04) \times (0.04) = 0.0016$ . To find the probability of both calculators working, find the complement of this event.
