In Figure A, the air ahead of the warm air mass is colder than the air behind the warm air mass. In Figure B, the air behind the warm air mass is colder than the air ahead of the warm air mass. 2.

### **Weather Patterns ANSWER KEY - Dublin City Schools**

Air Masses, Fronts, Storm Systems, and the Jet Stream Air Masses When a large bubble of air remains over a specific area of Earth long enough to take on the temperature and humidity characteristics of that region, an air mass forms. For example, when a mass of air sits over a warm ocean it becomes warm and moist.

### **Air Masses, Fronts, Storm Systems, and the Jet Stream**

Fronts. When air masses meet is a front, the collision often causes storms and weather changes. A front may be 15 to 200 kilometers wide and extend as much as 10 kilometers up to the troposphere. The kind of front that develops depends on the characteristics of the air masses and how they move.

### **MOVING MASSES**

Air Masses . Have you ever wondered how it can be almost 60 one day and the next day it is a snow storm? Changes in weather are caused by movement and interactions of the air masses, like when they move and meet! Air Masses: a large body of air that has similar temperature and moisture throughout.

### **Air Masses and Fronts - boone.k12.ky.us**

Fast Moving Fronts are those having the largest percentage increase in number of core papers from one period to the next in their respective fields. The rate of increase in citations to the core papers is also used as a criterion. An individual front can increase in size by either internal growth or by merging with one or more other fronts.
