The right option is; Segregation The diagram represents the Mendel's law of segregation. The law of segregation is one of the principles of heredity discovered by Gregor Mendel. Mendel's law of segregation states that all organisms possess two pairs of alleles for each trait and that these alleles separate during meiosis in a such a way that each gamete have only one pair of the alleles.

Heredity is the passing on of traits from parents to their offspring, either through asexual reproduction or sexual reproduction, the offspring cells or organisms acquire the genetic information of their parents. Through heredity, variations between individuals can accumulate and cause species to evolve by natural selection. The study of heredity in biology is genetics

Heredity - Wikipedia

Punnett squares are used to show possible combinations of alleles or to predict the probability of a trait occurring in offspring. Cats that have coats that are a patchwork of black and orange are called tortoiseshell cats, are typically female, and have genes that code for both black fur (X^o) and orange fur (X^O) located on the X chromosomes.
