6. INTERACTION OF LIGHT AND MATTER 6.1. Introduction One of the most important topics in time-dependent quantum mechanics is the description of spectroscopy, which refers to the study of matter through its interaction with electromagnetic radiation. Classically, light-matter interactions are a result of an oscillating electromagnetic field

Atoms with less electrons will have smaller, denser electron clouds, as there is a strong interaction between the few electrons in the atoms' orbitals and the positively charged nucleus. There is also less shielding in atoms with less electrons contributing to the stronger interaction of the outer electrons and the nucleus.

Phys 203 The Earth in Space (3-0-3) Introduces fundamental phenomena, such as plate tectonics, erosion, volcanism, and glaciation. Studies interaction between the earth's four major reservoirs: atmosphere, hydrosphere, biosphere, and solid earth. Investigates the dependence of the earth on the sun and the effect of the moon on the earth.
