In statistics, the correlation coefficient r measures the strength and direction of a linear relationship between two variables on a scatterplot. The value of r is always between $+1$ and -1 . To interpret its value, see which of the following values your correlation r is closest to: Exactly -1 . A perfect

downhill (negative) linear relationship [...]

How to Interpret a Correlation Coefficient r - dummies

Math anxiety. Mark H. Ashcraft defines math anxiety as "a feeling of tension, apprehension, or fear that interferes with math performance" (2002, p. 1). The academic study of math anxiety originates as early as the 1950s, where Mary Fides Gough introduced the term mathemaphobia to describe the phobia-like feelings of many towards mathematics. The first math anxiety measurement scale was ...

The formula for the best-fitting line (or regression line) is $y = mx + b$, where m is the slope of the line and b is the y-intercept. This equation itself is the same one used to find a line in algebra; but remember, in statistics the points don't lie perfectly on a line — the line is a model around which the data lie if a strong linear pattern exists.

How to Calculate a Regression Line - dummies

This site is intended as a resource for university students in the mathematical sciences. Books are recommended on the basis of readability and other pedagogical value. Topics range from number theory to relativity to how to study calculus.
