This tutorial is to guide you, the user, in changing your DNS address to (hopefully) a better alternative. OpenDNS, one of said alternatives, will be used as our main example but there are many others out there. Now while OpenDNS is great, it isn't for everyone: The best way to find the best one for you is to consult the link in the tutorial for a list of alternatives and choose the best ...

Windows 7: DNS Addressing - How to Change in Windows 7

A computer network is a digital telecommunications network which allows nodes to share resources. In computer networks, computing devices exchange data with each other using connections between nodes. These data links are established over cable media such as wires or optic cables, or wireless media such as Wi-Fi.. Network computer devices that originate, route and terminate the data are called ...

DNS Servers are an important piece of infrastructure necessary for every company or organization. They are involved in converting domain names to IP addresses that can be read by machines.

Common DNS Server Errors And How To Fix Them - TinyDNS.org

You'll see the term "zone" used in DNS references. Most of the time a zone just equates to a domain. The only times this wouldn't be true is if you set up subdomains and set up separate DNS servers to handle just those subdomains. For example, a company would set up the subdomains us.their-domain.com and europe.their-domain.com and would "delegate" a separate DNS server to each one of them.
