Logarithmic Loss, or simply Log Loss, is a classification loss function often used as an evaluation metric in kaggle competitions. Since success in these competitions hinges on effectively minimising the Log Loss, it makes sense to have some understanding of how this metric is calculated and how it should be interpreted. Log Loss quantifies the [...]

It's amazing the way that time can go by. People tend to think of computers as being high tech, but the TCP/IP protocol has been around in one form or another for over three decades. As such, TCP/IP has had time to really mature and be made stable and reliable. When it comes to computers, nothing is foolproof though. When routing packets across a network, things do occasionally go wrong.

Software licensing is a complicated topic, but knowing a little about software licensing can help you make sense of all that fine print. Editor's Note: This article was adapted from an article authored by Chris Peters in March 2009. Take the complexity of technology and stir in the jargon of the legal system and what do you get?

Seeing Data is a group of research projects which aim to understand the place of data visualisations (like those in the examples below) in society. This website includes information about projects which have been completed, are currently underway, or are about to start. It also includes, in the first section, resources to help non-experts develop their ability to make sense of data visualisations.

Welcome to VisualDataWeb.org. This website provides an overview of our attempts to a more visual Data Web. The term Data Web refers to the evolution of a mainly document-centric Web toward a more data-oriented Web. In its narrow sense, the term describes pragmatic approaches of the Semantic Web, such as RDF and Linked Data.
