The most appropriate size needle for administering an im injection for a 200-lb male with a non-viscous solution is: The appropriate needle size would be 1.5 in, 22 gauge to ensure intramuscular injection into the deltoid muscle. The skin at the site for the injection should be spread tight by using the thumb and forefinger; this helps in isolating the muscle. When administering the needle, it should be fully inserted into the muscle at a 90 ° angle.

A non-viscous fluid has a viscosity of zero. Viscosity is ratio of shearing stress to rate of shearing strain, so fluids that resist zero or low stress - or have very high rates of strain - will have viscosity close to zero. The only fluid that is close to zero is liquid helium at roughly 2°K. Hire better.
