The theory of consumer choice is the branch of microeconomics that relates preferences to consumption expenditures and to consumer demand curves. It analyzes how consumers maximize the desirability of their consumption as measured by their preferences subject to limitations on their expenditures, by maximizing utility subject to a consumer budget constraint.

1.. Introduction. Potential carbon reductions resulting from technological improvements in the consumption of energy may be reduced by the “rebound” effect (Wigley, 1997). The “take-back” or “rebound” effect refers to an increase in the supply of energy services with a corresponding decrease in the effective price, the size of which depends upon the underlying cost structure.
