A force is a push or a pull that acts upon an object as a result of its interaction with another object. Forces result from interactions! As discussed in Lesson 2, some forces result from contact interactions (normal, frictional, tensional, and applied forces are examples of contact forces) and other forces are the result of action-at-a-distance interactions (gravitational, electrical, and ...

I think it's a great question, and enjoyed it very much when I grappled with it myself. Here's a picture of some of the forces in this scenario.  The ones that are the same colour as each other are pairs of equal magnitude, opposite direction forces from Newton's third law.

Introduction. Forces were introduced in "What is a force?" including contact and non-contact forces AND, importantly for this page, free body diagrams showing multiple forces on an object. Force data is useless without its direction of action. You not only need to know the value of a force in newtons (N) but the precise direction or angle of the line of action of one force with respect to at ...

An engine or motor is a machine designed to convert one form of energy into mechanical energy. Heat engines, like the internal combustion engine, burn a fuel to create heat which is then used to do work. Electric motors convert electrical energy into mechanical motion, pneumatic motors use compressed air, and clockwork motors in wind-up toys use elastic energy.
