When teaching students to add decimals, I wind up reminding students to "line up the decimal points." This makes sense to some students while others follow the rule without understanding. How can we teach adding decimals to develop understanding and skill? Here's a possible suggestion: Give the correct answer up front.

The calculator will remember this setting when you turn it off: next time you can start with Step 1. Step 1. Make the Scatterplot. Before you even run a regression, you should first plot the points and see whether they seem to lie along a straight line. If the distribution is obviously not a straight line, don't do a linear regression.

I think that biases are almost always helpful. In effect, a bias value allows you to shift the activation function to the left or right, which may be critical for successful learning. It might help to look at a simple example. Consider this 1-input, 1-output network that has no bias:

### **artificial intelligence - Role of Bias in Neural Networks ...**

For long-term success in school, business and life, learning HOW to think is far more important than learning WHAT to think.. Yet rather than serve as the core of any education worthy of a rational human being, we have relegated the teaching of logic, argument analysis and critical reasoning to

specialty courses in universities that reach too few students, too late in their education.
