Butterflies and Moths of North America (BAMONA) is an ambitious effort to collect, store, and share species information and occurrence data. You can participate by taking and submitting photographs of butterflies, moths, and caterpillars.

### **Butterflies and Moths of North America | collecting and ...**

A common classification of the Lepidoptera involves their differentiation into butterflies and moths. Butterflies are a natural monophyletic group, often given the suborder Rhopalocera, which includes Papilionoidea (true butterflies), HesperIIDae (skippers), and HedyliDae (butterfly moths).

### **Comparison of butterflies and moths - Wikipedia**

North American Butterflies and Moths. The understated, brown Forage Looper Moth can be found all across the continent, and unlike most moths, is active day and night. The nocturnal Forbes' Silk Moth is a rare sight to behold in part to its late-night activity, large wingspan, handsome pattern, and small range.

Imogen Everard has lived much of her life under the care of her uncle, an abusive money-lender. His death may mean her freedom from him and the taint associated with the name they share. But her uncle

### **Of Moths and Butterflies: V.R. Christensen, B. Lloyd ...**

A moth's antennae are feathery or saw-edged. Butterflies and moths have many things in common, mainly scales that cover their bodies and wings. These scales are actually modified hairs. Butterflies and moths belong to the order Lepidoptera (from the Greek lepis meaning scale and pteron meaning wing).

(CNN)Fossils uncovered in Germany show that butterflies and moths may have been around for at least 200 million years -- 70 million years earlier than was previously thought, a new study has found.

### **Butterflies are older than flowers, new study says - CNN**

Moth vs Butterfly Pupae . Most moth caterpillars spin a cocoon made of silk within which they metamorphose into the pupal stage. Most butterflies on the other hand form an exposed pupa which is also termed as a chrysalis.. However there are many exceptions to this rule, for example the Hawk moths form an exposed chrysalis which however is underground.

### **What do you call a bunch of butterflies? - Quora**

Moths are stout and fuzzy; butterflies are slender and smooth. And wing colorations between the insect types are generally polar opposites, with butterflies sporting more vibrant colors. Additionally, moth wings, unlike butterfly wings, have a structure called a frenulum, which joins the forewing to the hind wing.
