An automotive navigation system is part of the automobile controls or a third party add-on used to find direction in an automobile. It typically uses a satellite navigation device to get its position data which is then correlated to a position on a road. When directions are needed routing can be calculated. On the fly traffic information can be used to adjust the route.

Recent developments. The use of high-technology (such as electronic engine control units) in advanced designs resulting from substantial investments in development research by European countries and Japan seemed to give an advantage to them over Chinese automakers and parts suppliers who, as of 2013, had low development budgets and lacked capacity to produce parts for high-tech engine and ...

James Dewhurst - Discover Your Reinforcement Solution

It's hard to believe but at one time automotive lighting was a strictly utilitarian function, with small, mostly round lights that barely allowed you to see and be seen in the darkness. In contrast, today's car lights are at the convergence of high-tech illumination and cutting edge automotive design. Both factory and aftermarket headlights and tail lights contain the latest in brilliant ...
