Multiply rational expressions. You multiply rational expressions in the same way as you multiply fractions of rational numbers. In other words you multiply the numerators with each other and the denominators with each other. Example. $\frac{4xy^2}{3y} \cdot \frac{2x}{4y} = \frac{2x}{1}$.

Multiply rational expressions (Algebra 1, Rational ...

Multiply and express as a simplified rational. State the domain. Let's multiply it, and then before we simplify it, let's look at the domain. This is equal to, if we just multiplied the numerators, a squared minus 4 times a plus 1, all of that over-- multiply the denominators-- a squared minus 1 times a plus 2.

Multiplying rational expressions (video) | Khan Academy

Multiplying Rational Expressions (page 1 of 2) In the above example, the 3 in the numerator of the first fraction duplicates a factor of 3 in the denominator of the second fraction, and the 5 in the denominator of the first fraction duplicates a factor of 5 in the numerator of the second fraction.

Multiplying Rational Expressions - Purplemath

Video transcript. These are just multiple ways of stating the same thing. With that stated, let's actually multiply and simplify this rational expression. So when we multiply, you just multiply the numerator and multiply the denominator, so you have $3x^2y$ times $14a^2b$ in the numerator.
