One Solution Algebra Definition

An equation may have zero, one, or more solutions (this is also true for a system of equations). The equation $2 + x = 5$ has only solution, for example. x can only equal 3, so there is one solution.

What does one solution mean in math - answers.com

Definition of . Solution. more ... A value, or values, we can put in place of a variable (such as x) that makes the equation true. Example: $x + 2 = 7$ When we put 5 in place of x we get: $5 + 2 = 7$ $5 + 2 = 7$ is true, so $x = 5$ is a solution. See: Variable. Solving Equations.

Solution Definition (Illustrated Mathematics Dictionary)

Sometimes equations have no solution. This means that no matter what value is plugged in for the variable, you will ALWAYS get a contradiction. Watch this tutorial and learn what it takes for an equation to have no solution.

Solution Solution Set Any and all value(s) of the variable(s) that satisfies an equation, inequality, system of equations, or system of inequalities.. With a system of equations or system of inequalities, the solution set is the set containing value(s) of the variable(s) that satisfy all equations and/or inequalities in the system.

Mathwords: Solution

Solutions. The solution of an equation is the value(s) of the variable(s) that make the equation a true statement. An equation like $2x + 3 = 7$ is a simple type called a linear equation in one variable. These will always have one solution, no solutions, or an infinite number of solutions.

Definition Of Discriminant. The Discriminant of an equation gives an idea of the number of roots and the nature of roots of the equation. If $ax^2 + bx + c = 0$ is a quadratic equation, then the Discriminant of the equation, i.e. $D = b^2 - 4ac$.

And before I deal with these equations in particular, let's just remind ourselves about when we might have one or infinite or no solutions. You're going to have one solution if you can, by solving the equation, come up with something like x is equal to some number.

Systems of Linear Equations: Definitions (page 1 of 7) A "system" of equations is a set or collection of equations that you deal with all together at once. Linear equations (ones that graph as straight lines) are simpler than non-linear equations, and the simplest linear system is one with two equations...

Systems of Linear Equations: Definitions

An algebraic solution or solution in radicals is a closed-form expression, and more specifically a closed-form algebraic expression, that is the solution of an algebraic equation in terms of the coefficients, relying only on addition, subtraction, multiplication, division, raising to integer powers, and the extraction of nth roots (square roots, cube roots, and other integer roots).

Extraneous solutions: multiplication. One of the basic principles of algebra is that one can multiply both sides of an equation by the same expression without changing the equation's solutions. However, strictly speaking, this is not true, in that multiplication by certain expressions may introduce new solutions that were not present before.

This solution is called the trivial solution.(Important Note: Trivial as used this way in Linear Algebra is a technical term which you need to know.) Definition. A vector is called trivial if all its coordinates are 0, i.e. if it is the zero vector. In Linear Algebra we are not interested in only finding one solution to a system of linear equations.
