where $w_{i,j}$ denotes the weight of the connection from node j to i and o the output node. The performance is sensitive to the topology choice (H). A NN with $H = 0$ is equivalent to the MR model. By increasing H , more complex mappings can be performed, yet an excess value of H will overfit the data, leading to generalization loss. A computationally efficient method to set H is to search through the ...

In statistical modeling, regression analysis is a set of statistical processes for estimating the relationships among variables. It includes many techniques for modeling and analyzing several variables, when the focus is on the relationship between a dependent variable and one or more independent variables (or 'predictors'). More specifically, regression analysis helps one understand how the ...

Statistics is a branch of mathematics working with data collection, organization, analysis, interpretation and presentation. In applying statistics to, for example, a scientific, industrial, or social problem, it is conventional to begin with a statistical population or a statistical model process to be studied. Populations can be diverse topics such as "all people living in a country" or ...

Folks, I beg to argue the following: inductive analytics is a better denomination than predictive, for the seemingly obvious reason that algorithms induce values from known data. That is what statistics and DM algorithms do. embedded analytics is a better denomination than prescriptive. A specific analytics can be either descriptive or inductive, and the relevant fact here is that any of those ...

1. Introduction. Predicting stock prices is an important objective in the financial world (Al-Hmouz et al., 2015, Barak and Modarres, 2015, Booth et al., 2014), since a reasonably accurate prediction has the possibility to yield high financial benefits and hedge against market risks (Kumar & Thenmozhi, 2006). A great point of discussion in literature is whether stock price behavior is ...
