A/P Set 2 Flashcards | Quizlet

Figure 1. Anatomy of the Lymphatic System. Lymphatic vessels in the arms and legs convey lymph to the larger lymphatic vessels in the torso. A major distinction between the lymphatic and cardiovascular systems in humans is that lymph is not actively pumped by the heart, but is forced through the vessels by the movements of the body, the contraction of skeletal muscles during body movements ...

The strength of J-coupling between two nuclei depends on several factors including types of nuclei, their distance, and orientation.. Types of nuclei. The example above illustrates heteronuclear coupling, where the involved nuclei are different (H and F). In clinical MRS homonuclear coupling between ^1H nuclei is the norm.; Number of bonds between nuclei.

Advanced J-coupling - Magnetism - Questions and Answers in MRI

A single RF pulse generates a free induction decay (FID), but two successive RF pulses produce a spin echo (SE). The time between the middle of the first RF pulse and the peak of the spin echo is called the echo time (TE). This remarkable discovery was made in 1949 by Erwin Hahn and can be counted among the most important developments in the history of NMR.

Spin echo (SE) - Questions and Answers in MRI

Metastasis is a pathogenic agent's spread from an initial or primary site to a different or secondary site within the host's body; it is typically spoken of as such spread by a cancerous tumor. The newly pathological sites, then, are metastases (mets). It is generally distinguished from cancer invasion, which is the direct extension and penetration by cancer cells into neighboring tissues.

Metastasis - Wikipedia
