Onychectomy, popularly known as declawing, is an operation to remove an animal's claws surgically by means of the amputation of all or part of the distal phalanges, or end bones, of the animal's toes. Because the claw develops from germinal tissue within the third phalanx, amputation of the bone is necessary to fully remove the claw.

The manifestation of the wind, particularly its direction, was long considered important. In particular, it was observed that the wind conditions at each seasonal change (e.g., from winter to spring) and at mid-season seemed to have a different fundamental nature, and so there were, all together, eight winds that were specified.
