Section 17: Closed Sets and Limit Points. 1. Let \mathcal{C} be a collection subsets of X . Suppose that \mathcal{C} is closed under finite unions and arbitrary intersections of elements of \mathcal{C} . Show that the collection is a topology on X . First, notice that $\emptyset \in \mathcal{C}$, since $\emptyset = \bigcap \mathcal{C}$. Also, if \mathcal{C} is a collection of sets in X , then for some $C \in \mathcal{C}$. By DeMorgan's Law it follow that $X \in \mathcal{C}$.

This text is designed to provide instructors with a convenient single text resource for bridging between general and algebraic topology courses. Two separate, distinct sections (one on general, point set topology, the other on algebraic topology) are each suitable for a one-semester course and are based around the same set of basic, core topics.

Point of post: This is the solutions to Munkres Chapter two Section 12 as the heading indicates. 1. Problem: Let X be a topological space, let \mathcal{A} . Suppose that for each $A \in \mathcal{A}$ there is an open set containing A such that $\overline{A} \subset U_A$. Show that $\bigcup \mathcal{A}$ is open.. Proof: So, we know that for each A there exists some open U_A such that $\overline{A} \subset U_A$. Clearly, $A \subset U_A$ and so U_A is the union of open sets, and thus open.. 2. ...
