In biology, a gene is a sequence of nucleotides in DNA or RNA that codes for a molecule that has a function. During gene expression, the DNA is first copied into RNA. The RNA can be directly functional or be the intermediate template for a protein that performs a function. The transmission of genes to an organism's offspring is the basis of the inheritance of phenotypic trait.

Chemotaxis (from chemo-+ taxis) is the movement of an organism in response to a chemical stimulus. Somatic cells, bacteria, and other single-cell or multicellular organisms direct their movements according to certain chemicals in their environment. This is important for bacteria to find food (e.g., glucose) by swimming toward the highest concentration of food molecules, or to flee from poisons ...

1. Introduction. Over the past few years, the concept of "gut health" is attracting significant interest amongst nutritionists, veterinarians and scientists (Kogut and Arsenault, 2016). This attention arises from the desire to develop nutritional interventions aimed at modulating gastrointestinal functionality towards optimal health so that farm animal production performances (growth, milk ...
