Mendelian Genetics Of Corn Lab

This laboratory investigates dihybrid cross and monohybrid cross and corn was used as the model. The shape and color of the corn were used in the description of the phenotype. The Mendellian genetics proves very instrumental in determining the phenotype and genotype of an organism in both the monohybrid and dihybrid crosses that were performed in the laboratory.

Mendelian Genetics in Corn INTRODUCTION Mendelian traits refer to phenotypical features whose pattern of inheritance follows Mendel's theories about the inheritance of traits. Corn — a diploid organism — has been widely used to study and illustrate mendelian traits. In corn, the dominant gene R, determines the presence of colored aleurone. kernels.

BIOLOGY 181 Lab # 10 Mendelian Genetics in Corn INTRODUCTION

In my biology honors class, my lab group and I conducted an experiment to apply our newfound knowledge of genetics – using multicolored and multi textured corn. By counting the number of corn kernels by color and texture, we were able to make inferences about the hereditary information (alleles) which were passed down from the parents.
