Math Extraneous Solutions

So, when we're finding a solution to this, we need to test our solution to make sure it's truly the solution to this first yellow equation here, and not the solution to this up here. If it's a solution to this right-hand side, and not the yellow one, then we would call that an extraneous solution. So, let's see if we can solve this.

A solution of a simplified version of an equation that does not satisfy the original equation. Watch out for extraneous solutions when solving equations with a variable in the denominator of a rational expression, with a variable in the argument of a logarithm, or a variable as the radicand in an n th root when n is an even number.

Mathwords: Extraneous Solution

In case you are not familiar with the concept, an extraneous solution (also called an extraneous root) is a solution you get in the process of solving, that turns out not to be a solution of the original equation. It is not actually a solution, and is not inherent in the problem itself, but is introduced by what you do.

So the equation has no solution at all! $x = 1$ is called an EXTRANEIOUS solution, which is really not a solution at all. Example 2: When you multiply through by the LCD and solve the resulting quadratic equation, you get solutions $x=2$ and $x=1$. However when we try to check the solution $x=2$, it causes the first and last denominators to become 0 ...

Radical equations with extraneous solutions worksheet : Here we are going to see some practice questions on radical equations with extraneous solutions. What is extraneous solution ? An extraneous solution is a solution derived from an equation that is not a solution of the original equation. Therefore, you must check all solutions in the original equation when you solve radical equations.

Radical equations with extraneous solutions worksheet

A lot of times in algebra, especially when you deal with radical functions, you will end up with what you call extraneous solutions. These are solutions to an equation that you will get as a result of your algebra, but are still not correct. It's not that your process is wrong; it's just that this solution does not fit back into the equation (math is very complicating sometimes).

In mathematics, an extraneous solution (or spurious solution) is a solution, such as that to an

equation, that emerges from the process of solving the problem but is not a valid solution to the problem. A missing solution is a solution that is a valid solution to the problem, but disappeared during the process of solving the problem. Both are frequently the consequence of performing operations ...

Whenever you solve a rational equation, always check your (interim) solution against the denominators (and their disallowed values) from the original equation. It is entirely possible that a problem will have an invalid (that is, an "extraneous") solution. This is especially true on tests. So always check!
