In mathematics, tetration (or hyper-4) is iterated, or repeated, exponentiation. It is the next hyperoperation after exponentiation, but before pentation. The word was coined by Reuben Louis Goodstein from tetra-(four) and iteration. Tetration is used for the notation of very large numbers. The notation means $\cdot^{\cdot^{\cdot}}$, which is the application of exponentiation – times.

In product development and process optimization, a requirement is a singular documented physical or functional need that a particular design, product or process aims to satisfy. It is commonly used in a formal sense in engineering design, including for example in systems engineering, software engineering, or enterprise engineering. It is a broad concept that could speak to any necessary (or ...

Lots of reads in every query, fewer regular writes. Both databases perform well on reads where the hot data set fits in memory. Both also emphasize join-less data models (and encourage denormalization instead), and both provide indexes on documents or rows, although MongoDB's indexes are currently more flexible.. Cassandra's storage engine provides constant-time writes no matter how big your ...
