The process is identical for division with the extra first step of multiplying by the reciprocal. When multiplying with rational expressions we follow the same pro-cess, first divide out common factors, then multiply straight across. 1

### **Objective: Multiply and divide rational expressions ...**

Here are the steps required for Dividing Rational Expressions: Step 1: Completely factor both the numerators and denominators of all fractions. Step 2: Change the division sign to a multiplication sign and flip (or reciprocate) the fraction after the division sign; essential you need to multiply by the reciprocal. Step 3:

### **Dividing Rational Expressions - Mesa Community College**

After multiplying rational expressions, factor both the numerator and denominator and then cancel common factors. Make note of the restrictions to the domain. The values that give a value of 0 in the denominator are the restrictions. To divide rational expressions, multiply by the reciprocal of the divisor.
