When/how to use Mockito Answer. Mockito is a popular open source Java testing framework that allows the creation of mock objects. In our test, normally we want to fake the Service 's behavior to return canned data, so that the unit test can focus on testing the code that interacts with the Service. We use when-return clause to stub a method.

Google Testing Blog: When/how to use Mockito Answer

Void methods can be used with Mockito's doNothing(), doThrow(), and doAnswer() methods, making mocking and verifying intuitive: However, doNothing() is Mockito's default behavior for void methods. This version of whenAddCalledVerified() accomplishes the same thing as the one above: DoThrow() generates an exception: We'll cover doAnswer() below.

Mocking Void Methods with Mockito | Baeldung

For integration with JUnit Jupiter (JUnit5+), use the `org.mockito:mockito-junit-jupiter` artifact. For more information about the usage of the integration, see the JavaDoc of MockitoExtension. 46. New Mockito.lenient() and MockSettings.lenient() methods (Since 2.20.0) Strict stubbing feature is available since early Mockito 2.

Mockito (Mockito 2.27.0 API) - Javadoc.IO

The when then pattern. We do this in each of the test methods, the following line of code tells the Mockito framework that we want the save() method of the mock dao instance to return true when passed in a certain customer instance. when(dao.save(customer)).thenReturn(true); when is a static method of the Mockito class...
