Discussion the spectrum of mechanics. The general study of the relationships between motion, forces, and energy is called mechanics. It is a large field and its study is essential to the understanding of physics, which is why these chapters appear first.

As stated earlier, the motion of a satellite (or of a planet) in its elliptical orbit is given by 3 "orbital elements": (1) The semi-major axis  $a$ , half the greatest width of the orbital ellipse, which gives the size of the orbit. (2) The eccentricity  $e$ , a number from 0 to 1, giving the shape of the orbit. For a circle  $e = 0$ , larger values give progressively more flattened circles, up to  $e = 1$  ...

Instantaneous acceleration, meanwhile, is the limit of the average acceleration over an infinitesimal interval of time. In the terms of calculus, instantaneous acceleration is the derivative of the velocity vector with respect to time:  $\frac{dv}{dt} = a$  (Here and elsewhere, if motion is in a straight line, vector quantities can be substituted by scalars in the equations.)

Rated 1 out of 5 by Disappointed from Only if you're afraid of the dark It was easy to install and it does come on, however, it rarely ever shuts off. I've had it installed for a couple weeks and finally got tired of seeing it on all the time. Got the ladder out again, put the light in test mode, dialed down to minimum movement detection and tried to adjust the motion detection zone.

A plane is a two-dimensional doubly ruled surface spanned by two linearly independent vectors. The generalization of the plane to higher dimensions is called a hyperplane. The angle between two intersecting planes is known as the dihedral angle. The equation of a plane with nonzero normal

vector  $n=(a,b,c)$  through the point  $x_0=(x_0,y_0,z_0)$  is  $n \cdot (x-x_0)=0$ , (1) where  $x=(x,y,z)$ .

The aspect ratio of a geometric shape is the ratio of its sizes in different dimensions. For example, the aspect ratio of a rectangle is the ratio of its longer side to its shorter side – the ratio of width to height, when the rectangle is oriented as a "landscape".. The aspect ratio is most often expressed as two integer numbers separated by a colon (x:y), less commonly as a simple or ...
