Modifications to DNA and histones are dynamically laid down and removed by chromatin-modifying enzymes in a highly regulated manner. There are now at least four different DNA modifications (Baylin and Jones, 2011, Wu and Zhang, 2011) and 16 classes of histone modifications (Kouzarides, 2007, Tan et al., 2011). These are described in Table 1. These modifications can alter chromatin structure by ...

Cancer Epigenetics: From Mechanism to Therapy

Safety evaluation is caught in a frustrating circle. It is neither possible nor sensible to try to obtain the information needed to assess every imaginable toxic risk associated with every substance, and pursuit of greater safety therefore demands the setting of priorities as well as sensible limits for investigation.
