But at the lowest point the blow suddenly changes the kind of motion. Physicists, then, having in their mind such curvilinear forms, representing the law of the motion of sounding bodies, speak briefly of the form of vibratum of a sounding body, and assert that the (quality of tone depends on the form of vibration.

When "Sensations of Tone" was originally published, some musicians took offense to its mechanical explanations of music, a resistance that persists even now. Musicians don't want to think of what they do as being equivalent to a mechanical engineer's constructs. There is some merit to that prejudice.
