Statistics is a branch of mathematics working with data collection, organization, analysis, interpretation and presentation. In applying statistics to, for example, a scientific, industrial, or social problem, it is conventional to begin with a statistical population or a statistical model process to be studied. Populations can be diverse topics such as "all people living in a country" or ...

A fitted linear regression model can be used to identify the relationship between a single predictor variable  $x_j$  and the response variable  $y$  when all the other predictor variables in the model are "held fixed". Specifically, the interpretation of  $\beta_j$  is the expected change in  $y$  for a one-unit change in  $x_j$  when the other covariates are held fixed—that is, the expected value of the partial ...
