Meiosis Dry Lab . Introduction: Meiosis is a reduction division process which produces special cells called gametes. These gametes contain one half of the normal chromosome number as the original cell. Male gametes are called sperm while the female gametes are called eggs.

Meiosis is the second important kind of nuclear division. It resembles mitosis in many ways but the consequences of meiotic divisions are very different from those of mitotic divisions. While mitotic division may occur in almost any living cell of an organism, meiosis occurs only in special cells.

The DNA of the parent cells is replicated in interphase preceding both mitosis and meiosis. However, in meiosis, replication is followed by two divisions. Meiosis reduces the chromosome number of the parent cell so that four daughter cells are produced, each with one-half the chromosome number of the parent cell.
