In neuroanatomy, a nucleus (plural form: nuclei) is a cluster of neurons in the central nervous system, located deep within the cerebral hemispheres and brainstem. The neurons in one nucleus usually have roughly similar connections and functions. Nuclei are connected to other nuclei by tracts, the bundles (fascicles) of axons (nerve fibers) extending from the cell bodies.

Nucleus (neuroanatomy) - Wikipedia

Leaving no seizure undetected. Although technology is available to detect up to 100% of seizures in clinical settings, the necessary equipment is not currently suitable for continuous use in daily living, and reliable detection requires analysis by a physician after the fact.
