Blood gases are a group of tests that are performed together to measure the pH and the amount of oxygen (O₂) and carbon dioxide (CO₂) present in a sample of blood, usually from an artery, in order to evaluate lung function and help detect an acid-base imbalance that could indicate a respiratory, metabolic or kidney disorder.. A person's body carefully regulates blood pH, maintaining it ...

Describe here, eh? In American media, Canada is a sweet, quirky and slightly backwards version of America.It's as if you took everyone from Minnesota, gave them an obsession with hockey note (OK,

it's practically an unofficial religion), and made that an entire country.
