Content. A continuous function (relative to the topologies on and) is a function such that the preimage (the inverse image) of every open set (or, equivalently, every basis or subbasis element) of is open in . A function is continuous at a point if for each neighborhood of there is a neighborhood of such that .

Point of post: This is the solutions to Munkres Chapter two Section 12 as the heading indicates. 1. Problem: Let be a topological space, let .Suppose that for each there is an open set containing such that .Show that is open.. Proof: So, we know that for each there exists some open such that .Clearly. and so is the union of open sets, and thus open.. 2. ...

James Munkres. Professor Munkres is a differential topologist, and is also responsible for the Munkres assignment algorithm. He authored numerous texts, including Topology (a well-known undergraduate course book), Analysis on Manifolds, Elements of Algebraic Topology, and Elementary Differential Topology. He also wrote Elementary Linear Algebra.

2 Ex. 13.7 (Morten Poulsen). We know that T_1 and T_2 are bases for topologies on R. Further-more T_3 is a topology on R. It is straightforward to check that the last two sets are bases for topologies on R as well.

This book is intended as a text for a course in analysis, at the senior or first-year graduate level. A year-long course in real analysis is an essential part of the preparation of any potential mathematician. For the first half of such a course, there is substantial agreement as to what the syllabus should be. Standard topics

Munkres also does the Smirnov Metrization Theorem which relies more on paracompactness. But Kelley does Moore-Smith convergence and nets-a way of doing topology with sequences, and only gives a reference for Smirnov. The Munkres text gave a brief introduction to homotopy and the fundamental group-Kelley none.
