In graph theory, a flow network (also known as a transportation network) is a directed graph where each edge has a capacity and each edge receives a flow. The amount of flow on an edge cannot exceed the capacity of the edge. Often in operations research, a directed graph is called a network, the vertices are called nodes and the edges are called arcs.A flow must satisfy the restriction that ...

In optimization theory, maximum flow problems involve finding a feasible flow through a single-source, single-sink flow network that is maximum.. The maximum flow problem can be seen as a special case of more complex network flow problems, such as the circulation problem.The maximum value of an s-t flow (i.e., flow from source s to sink t) is equal to the minimum capacity of an s-t cut (i.e ...
