analysis and synthesis are the study of network topology. Electric network problem can be represented by drawing graphs. Inthis paper, we present a circuit network in the concept of graph theory application and how to apply graph theory to model the circuit network. Keywords: Graph theory, adjacency matrix, electrical circuit and analysis 1.

Application of Graph Theory in Electrical Network

Network analysis starts with a network and by applying the various electric circuit theorems predicts the response of the network. Network synthesis on the other hand, starts with a desired response and its methods produce a network that outputs, or approximates to, that response. Network synthesis was originally intended to produce filters of ...

Network synthesis filters - Wikipedia

Network analysis is the process of finding the voltages across, and the currents through, all network components. There are many techniques for calculating these values. However, for the most part, the techniques assume linear components. Except where stated, the methods described in this article are applicable only to linear network analysis.

Network analysis (electrical circuits) - Wikipedia

It explores state-space synthesis as well as analysis, employing modern systems theory to unite the classical concepts of network theory. The authors stress passive networks but include material on active networks. They avoid topology in dealing with analysis problems and discuss computational techniques.
